I'm curious what other people are following to judge how close the house of cards is to falling. My personal favorite is USDT / Tether. I find both the market cap and how far it is from the dollar peg interesting:

Of course Bitcoin, which I think speaks for itself:

What is a little more interesting is the ETH/BTC price. Since ETH/USD is largely dragged around by the price of BTC, I find this more telling. IMO, it looks like ETH is doing a dead cat bounce on the way back to 0.02 ■

For general stock market conditions, I follow S&P; 500, Nasdaq 100, and Dow Jones 30 indexes as well as VIX - the US S&P; 500 volatility index

I also follow Tesla due to it's similarities to GME and association with the same shorts - and of course GME:

What about yall? What is telling to you?
