First time poster, so please be gentle in your responses.

I currently hold some GME in a brokerage account (and Computershare), but I am looking for some options with my retirement plan.

Currently, my Fidelity 403(b) plan does not allow me to buy GME directly. I can only buy mutual funds and ETFs. Their BrokerageLink option also does not allow me to buy stocks directly.

I investigated mutual funds and ETFs that hold a significant amount of GME. A couple of ETFs that I have my eye on are SFYF and FTXD. Both ETFs have the most exposure (not the most shares) as a percentage of their total investment. FTXD has 6.90% GME in its portfolio with about 8,342 shares, as of 9/15/2021. SFYF has 6.22% GME in its portfolio with over 5,862 shares (couldn't find a good source for the updated share holdings), as of 9/15/2021.

From all the DD that I've read, it is very likely SFYF ETF is being used for manipulating the price of GME and other meme stocks. I am not sure about the FTXD ETF.

Does anyone have any insight on whether it is OK to invest in these ETFs, or should they be avoided? What is the concern with purchasing these funds, even if the underlying stock is being borrowed and shorted? With MOASS being inevitable, wouldn't that hurt the shorts but help the fund that lent the stock? This may be a dumb, obvious question, but I am struggling to understand the concept.

If it turns out that these ETFs should be avoided, are there any alternative mutual funds or ETFs that would contain GME that would be worth investing in for MOASS? I figure some mutual funds offered by Vanguard would be good, but they also have other holdings that would lose significant value in a market crash.

Any insight would be helpful. Thanks!
