With all the Mean Girls post, a thought came across my mind. I'm not sure if it's 100% solid but here it goes: the actual way to DRS is DRS everything you have except one share. Register 99.99% and actually be prepared to only sell one for whatever price you have in mind.

741 in mean girls somehow concludes Lindsey Lohan's character to eventually answer: "there is no limit."
741 could mean is there is no limit to the value of a GME share.

One in the chamber could possibly mean that DFV registered all his shares except one. One that is probably meant to be sold.

Think about it, what's the difference between selling one share at whatever price you set vs selling ten shares at whatever price you set? You can still technically sell one share at a value more than ten if you simply wanted to.

Plus, that means more registered shares, more shares that are locked, so that if you do sell that one share, you don't have to worry about price fluctuation because everything is locked in.

So, anyone have any input on this?

This is not financial advice. I just like to buy hold and DRS a stock I like

Edit: 741 reference in mean girls
