I'm sure all of us will be exhilarated when we see the price to start having some commas added to it.

But I think it is also important to look beyond arbitrary price points and look at milestones for the market cap.

Because as noted in the title, VW surpassed Exxon Mobil(#1 company by market cap in 2008) temporarily while it was having its run up.

Let me take you on a journey to look at some of these milestones.

- The largest company by market cap is Apple with: \$2.345T
- GME current market cap as of writing: \$9.904B
- GME shares outstanding as of writing: 76.129M

Just to show, so anybody that wants to can plug in their own numbers

Price per share = Market Cap / Shares Outstanding

##GME @ close

$\$130.09 = \$9.904\text{B} / 76.129\text{M}$

(If you want to adjust for the split, just multiply the outstanding shares by 4, or divide price-per-share by 4).

Split-adjusted: \$32.52

##GME @ \$50B market cap

$\$656.78 = 50\text{B} / 76.129\text{M}$

Split-adjusted: \$164.19

##GME @ \$100B market cap

$\$1313.56 = 100\text{B} / 76.129\text{M}$

Split-adjusted: \$328.39

##GME @ \$500B market cap

$\$6,567.80 = 500\text{B} / 76.129\text{M}$

Split-adjusted: \$1,641.95

##GME @ \$1T market cap

$\$13,135.60 = 1\text{T} / 76.129\text{M}$

Split-adjusted: \$3,283.90

##GME @ \$2T market cap

$\$26,271.20 = 2\text{T} / 76.129\text{M}$

Split-adjusted: \$6,567.80

##GME @ Apple's market cap

$\$30,802.98 = 2.345\text{T} / 76.129\text{M}$

Split-adjusted: \$7,700.74

This was to hopefully add a little perspective for when things do launch. I'm excited about price points, but I'm even more excited to see the market cap start rising through the ranks.
