So if you don't know what the critical margin theory is, go read

[THIS]([https://www.reddit.com/r/Superstonk/comments/v6cwds/gamestop\\_critical\\_margin\\_theory](https://www.reddit.com/r/Superstonk/comments/v6cwds/gamestop_critical_margin_theory)) post.

But I will show you guys/gals with [THIS](<https://imgur.com/a/j89ynQw>) photo, showing how the last 3 days' highs line up perfectly with the critical margin line I placed 2 weeks ago. I would also like to mention that on the date March 29, GME was halted, that is the first time since the sneeze that the price superceded the critical margin line. I really believe that, that line is very important, and at the current rate GME should be below \$122.30 by July 29. If you dont already know, end of july is the dead line for Gamestop to release the marketplace. So if this theory is correct we should be expecting about -\$0.80/day draw down, or halting/fuckery if it passes that line. Buckle up, buckaroo!
