I used Ibkr to drs and it was easy. It went like this:

- Sign up on interactive brokers

- Add funds and convert to USD (you can add any currency)

- Search gme and place order

- Wait for shares to settle

- Transfer positions via drs from the menu

- They will send you the DRS statement to your address. The process is automated and pretty straightforward.

- Use the DRS info on computershare to get an access code sent to your address

- Use the code to log in and stare at your glorious purple circle.

That's pretty much it. All of this can also be done on mobile and doesn't take long to get done.

The fee is only \$5 but you have to make sure it's USD. You can hold multiple currencies in IBKR.

IBKR is a broker so you can buy and hold there and DRS 95%.

You can move the shares back to IBKR from computershare just as easily.

They're real shares and they're not synthetics shorts. Real share ownership is only possible at the transfer agent, ComputerShare.
