In the interests of helping the community to create **high-quality**, **reproducible** analyses related to GME I thought it might be useful to put together a master thread that outlines the various data providers that Apes use.

Calling all apes! Please leave a comment with the

- URL of the data provider that you use,
- a brief description of the data provider: what type of data (ticker data, options data, Level 1, Level 2, etc.), how granular (1 min, 5 min, etc.), or any other important info about the data provider
- whether the data provider provides programmatic data access (API) or some other format (CSVs, Excel files, etc)
- cost: Free, one-time fee, or monthly cost? If so, how many dollars does it cost?
