TL;DR - ∞ , What is INFINITY? How can INFINITY be achieved? What's an exit strategy? No ∞ , NO SELL. This is the true test of Diamond hands.

I'm getting asked what price I'll sell at and this and that from multiple people so I thought we should go back to the basics to the very definition of INFINITY so all apes have the same understanding of the situation. (First of all, I'm honored to be here among you apes, and to share in this once-in-a-lifetime opportunity)

 ∞ <-- what the fuck is that?

That, my brothers and sisters, is the symbol for INFINITY.

What is INFINITY?

Merriam-Webster defines INFINITY as: "unlimited extent of time, space, or quantity" (interesting, let's get back to this one in a bit) and "the limit of the value of a function or variable when it tends to become numerically larger than any preassigned finite number". Yes, this one is much easier to start with first.

Why does this matter and why am I back in math class on Superstonk?

Well, it matters, because the moment before a short sale is confirmed on its way to be executed, a final warning appears to the short seller, showing the maximum gain/loss from the transaction. The max gain is calculated to be: stock price * number of contracts short * 100 (shares/contract). If a company goes bankrupt and the stock goes to 0, the lowest it can go, then the short seller can make the maximum gain. The maximum loss, on the other end of the spectrum, appears as: ∞ . Yes, the hero of our story appears. Meaning that the longer the short holds their position and the higher the stock goes, they will keep losing more and more money, up to INFINITY. So the maximum risk to short selling is NOT "Everything you own" but rather, INFINITY, ∞ .

Let's get back to the definition of INFINITY and clean it up a little:

"~~the limit of the value of a function or variable when it tends to become~~ numerically larger than any ~~preassigned~~ finite number" or stated simpler, INFINTY is "numerically larger than any finite number"

What is "numerically larger than any finite number"? A good place to start is the most expensive stock on the market right now. It's BRK.A at \~\$420k (nice). INFINITY is larger than \$420k. How about \$1M (\$1,000,000)? Yes, INFINITY is larger than that. How about \$1B (\$1,000,000,000)? Yes, INFINITY is larger than that. How about \$1T (\$1,000,000,000,000)? Yes, INFINITY is larger than even \$1T. What is the largest number you can think of? Yup, INFINITY is larger than that, too.

Google states the largest number in the universe to be a googolplex (check it, I'm not making this shit up). What is a googolplex? It is $10\$ googol. What is a googol? It is $10\$ not a 1 with 100 zeros after it. Just to show you visually what that looks like, a googol is equal to 10, 000,

The short sellers risk is that large? Yes, their maximum risk is ∞ . And they have to acknowledge this every time they make a short sale. Their risk is NOT ALL THEY OWN. IT IS MOTHER FUCKING INFINITY. The makers of the stock market actually had the fucking audacity to program this unfathomable number in the

Let's get back to that first definition of INFINITY: "unlimited extent of time, space, or quantity". We discussed unlimited quantity already but how about unlimited time and space. The universe is finite in time (13.7B years) and space (93B light years across). INFINITY is larger than the fucking universe, too, and yet, this is the maximum RISK for a short seller. They acknowledge this when making their bet. Maximum loss: ∞

To give you another viewpoint of INFINITY, I will make the case that little symbol, ∞ , is not even comprehensible by our 3 dimensional brains. Our 3D brains can only imagine up to the 11th Dimension. Google/YouTube "flatlanders to 11th dimension" and prepare to be amazed and/or confused. Are there more dimensions than 11? You bet your ass, but our human brains cannot comprehend them. How's that for some humble pie? And yet, our little friend, ∞ , is greater than even the 11th Dimension. ∞ is larger than everything that our brain can even imagine. We don't have the capacity to understand what ∞ is. It's more than everything. And that is the risk of a short seller. ∞

That's what I'm interested in seeing; INFINITY, ∞ . Not \$1k, not \$1M, not \$1B, not \$1T, not even \$1 googolplex. I want to see the fucking symbol that the short seller agrees to when making the bet. ∞

How do we get to INFINITY? Well, in a perfectly honest system, there could be a tug-o-war between the longs and shorts. With all shares in play, if long positions just bought, held, and didn't sell, there would no longer be any shares to buy so the price must rise and keep rising, until it got to a value 100 long shares sold at and that would satisfy one short sellers contract to close their short position. If no one sells, the price just keeps rising, to, you guessed it, INFINITY. That's in an honest system, where no more shares exist than what are issued by the company. If there are synthetic shares created from naked short selling (in other words, from cheating), well that's when things get real interesting and we get to see some fireworks. Now, more chances of seeing ∞ exist, as now there is more wiggle room for synthetic shares to be paperhanded and not affect the ticker still to continue rising to INFINITY, ∞ .

Let's get back to INFINITY. What does ∞ look like on a ticker? I don't know, no one knows. (Does any ape even know how many characters the ticker is able to climb to? We know 6 is possible currently from BRK.A. Is the system programmed to 7,8,9? What is the max? Asking so we all have a better idea on what to expect when the system breaks) It has never happened before - yet, it is consistently the maximum risk that all short sellers agree to. ∞

So that's my answer to all the people that ask me when I'm selling - when the ticker says " $_\infty$ ". Then I'll frame the screenshot and sell 1 synthetic share from a broker outside CS which houses the INFINITY POOL and make the SHFs sweat. Realistically, the system will break before we get to $_\infty$ and all the dumbass shorts who have not closed their position will get all their assets distributed across all the real and synthetic shares they created. I'm sure, just like Bernie Madoff, ex-chairman of NASDAQ, did before going to jail all these assfucks are sending their money, jewelry, and other assets to their friends and family so us apes do not get our hands on them. They are worried about us taking $_\infty$. My hope is that you understand more clearly what the maximum risk for short sellers is now and why they are shitting their shorts daily. It's because of our little friend, $_\infty$.

They TURNED OFF the fucking BUY button, they TURNED OFF margin calls, they paid congress members to pass laws to hide their positions in swaps they don't have to report for years to come, etc, etc, etc and NOTHING IS DONE ABOUT IT. They literally changed the house rules after the bets were placed. What casino can you go to and then take back your bet after you know you've lost the hand? The American Stock Market, but only if you are a privileged rich 1%er to whom the rules do not apply. That's why I'm turning OFF my SELL button. I just want to see this beautiful symbol, ∞ , and hopefully a better world, with it. Sure, we can get to GOASS (greatest) easily, but it's only in searching for our friend, ∞ , by truly DIAMOND HANDING, that we'll make it to the "MOTHER". This is a once-in-a-lifetime opportunity that is being handed to us on a silver platter. So fuck NO CELL, NO SELL. That's still selling and way too generous. I'M NOT FUCKING SELLING. There is more to be had. INFINITE MORE. Be greedier than SFHs. Look at what they've done to the world with that money. Think about the world apes will create with that money. Get creative. In the words of The Legend, "WHAT'S AN EXIT STRATEGY?". DFV definitely knows the deep fucking value of ∞ .

I like the stock and this is not financial advice. Do what your heart desires to see you on Uranus's moon! Can't stop, Won't stop, GAMESTOP	Good luck to you all and hope
