I've seen posts with just odd overlaps.

Here's the cycles overlapped based on the quarterly options expiry T+2 run ups before the future rolls (or not).

These are the daily high prices, not closing prices.

Aligned by ETF quarterly options expiration, then the Futures/Monthly expiration \*\*and roll\*\* deadlines. MMs get T+2, ETF APs get T+3

Data is from Yahoo Finance GME historical prices.

'You are here' is Nov 12, 2021.

This is based on [u/Criand](https://www.reddit.com/u/Criand/) 's Doomps, futures, etc. And [u/Gherkinit](https://www.reddit.com/u/Gherkinit/) 's extremely high quality youtube streams.

Please recognize the shapes of failed (not rolled) vs. completed rolls of the alleged futures.

Don't think about day trading GME, it will burn you and you will regret it for the rest of your life. Really!

No Dates! ■

None of this is advice.
