So I don't think I need to say I am not a financial advisor (it should be obvious from the post itself), I, however, have PhD both in physics and math, so here you have my two cents.

The distance from the moon to earth is 384 400 000 m (238 855 miles for you, my American apes). I really hope I do not need to explain that the speed of light is finite, and it is 299 792 458 m/s (the fuck if I know how you measure speed, I guess 18 600 000 miles/jiffy)

It takes (distance/velocity) light to travel from the moon to the earth approx 1.33 seconds (133 jiffies)

I really do believe we can moon with our GME tickets almost instantly - but that would rip apart the fabric of the matter itself. Because if we moon land instantly we would be both on the moon and still on land at the same time. Halts are adding the additional time required to preserve laws of physics! Be grateful for them. We would not be able to enjoy our tendies with space ripped apart.,  $\blacklozenge$   $\blacksquare$  \\* .  $\blacksquare$  .  $\blacksquare$  .  $\blacksquare$  .  $\blacksquare$  .  $\blacksquare$  .  $\blacksquare$  . .  $\blacksquare$  .  $\blacksquare$  . .  $\blacksquare$  .  $\blacksquare$  .  $\blacksquare$  . .  $\blacksquare$  .
