One baseless claim crypto-critics make is that it has no use-case, is a ponzi scheme, and a blockchain is a less-efficient database. However, when top-ranked colleges and universities offer courses on blockchain and crypto, it leads me to believe there's something there worth exploring.

According to [this study](https://blog.coinbase.com/the-rise-of-crypto-in-higher-education-81b648c2466f) from 2018 (surely the number is higher currently), 42% of top 50 universities offer a course in blockchain or cryptocurrencies. Here's a list of schools offering courses in crypto that I know of or was able to find with a quick search, in no particular order. If you know of any more, please comment and I'll add it to the list.

* MIT
* Harvard
* Cornell
* New York University
* Princeton
* Columbia
* Stanford
* Carnegie Mellon
* Duke
* Georgetown
* UC Berkeley
* U Illinois
* Cal Tech
* UCLA
* U Texas-Austin
* UPenn
* John Hopkins
* Northwestern
* University of Sydney
* University of Edinburgh
* National University of Singapore
* Universidad Europea de Madrid - Spain

Obviously, this is quite a long list. I think it's only a matter of time before we see an explosion of adoption in this space.
