Title: I'm glad that Gamestop takes it slowly. Anything bound to a blockchain needs to be crafted with A LOT of care (and tender love)

As a software engineer, I frequently see the cycle of code being released, followed by bugs being discovered, investigated then patched in an update. **This is something you cannot do on a smart contract.** Once your code is sent and ingested by the blockchain, it stays there, as is, forever. There has already been a few crises due to this (lookup "the DAO fork" if you are curious).

So we don't know a lot about Gamestop's implementation of the expected NFT marketplace, and even if they can stay more "off chain" thanks to some crypto-partner (allegedly), I feel so much more confident seeing that they are not going all-out too fast, that they take their sweet time (while MSM sweats blood) and make sure to test/benchmark/fuzz/break their project from any angle possible before going public with anything.

I'm in here for the long run and I can't wait to see (but I will) what you guys have in store! Keep up the good work!
