* Updated

In the Ethereum ecosystem, there are two types of accounts: **Externally Owned Accounts** (EOA Wallets) and **Smart Contract Accounts** (Smart Contract Wallets).

EOA Wallet

Externally Owned Accounts are controlled by a Private Key, which is generated by your Secret Recovery Phrase and **CAN be imported/exported to any other Ethereum wallets.** GameStop Wallet is an EOA wallet. [For example an Ethereum wallet created with Metamask can be imported to Gamestop Wallet.](https://support.blockchain.gamestop.com/hc/en-us/articles/5558142529555)

Smart Contract Wallet

Smart Contract Wallets are generated by a smart contract which **CAN NOT be exported/imported to other Ethereum wallets.** Smart contract wallets are generally controlled by multiple keyholders (or EOA wallets). You can assign keyholders (guardians) for security. For example, Loopring smart contract wallet can not be imported to GameStop wallet. You can however, transfer funds from a smart contract wallet to an EOA wallet.
