What Is Gitcoin (GTC)?

Table of Contents ⌄

Gitcoin is a DAO that incentivizes coders and developers to work on building essential digital public infrastructure. Gitcoin recognized that **public goods often suffer from a lack of funding and developer work.** These are goods that are non-rivalrous and non-excludable like **fresh air or, in the digital space, open-source programs.**

With the aim of supporting open-source projects, Gitcoin provides several ways to fund the work of talented developers on open-source software and promote collaboration between developers that do so. Some of the ways Gitcoin supports their mission are **developer grants, bounties, hackathons, the Kernel Fellowship and Kudos.** Gitcoin also provides various educational resources, technologies, tools and a community that focuses on building digital public infrastructure.
