Hey all,

Monthly update on the state of the best -and only one- Free Open-Source Terminal: [Gamestonk Terminal](https://gamestonkterminal.netlify.app/). Repository: https://github.com/GamestonkTerminal/GamestonkTerminal.

Since last month, some of the features that have been added are:

* **Insider Screener** based on http://openinsider.com

https://preview.redd.it/wuztbel6tdd71.png?width=2212&format;=png&auto;=webp&s;=5e5effe665172ceb65da60ebd90524ca956d2270

* **Market overview** from https://www.wsj.com/market-data
* A neat **ETF screener** to filter for ETFs that meet a certain criteria, like: price, assets held, net asset valuation, expense ratio, PE Ratio, dividend yield, and more.
* An initial version of a **supply-chain analysis**, that based on a company shows not only the suppliers but also customers.
* Literally **40 new crypto commands** from a single contributor (author of https://www.reddit.com/r/Python/comments/nwj221/moonbag_explore_crypto_data_with_simple_python_cli/)! It's actually insane the amount of new functionalities this crypto menu already has...
* We incorporated also an **Options screener** from https://ops.syncretism.io. The author (https://www.reddit.com/r/thetagang/comments/o6yx3e/i_made_an_open_source_options_search_engine/) has been extremely keen with incorporating his API.
* For more terminal updates, you can follow our twitter account https://twitter.com/gamestonkt or check the #new-features channel on [our discord](https://discord.gg/Up2QGbMKHY).

Some of the next steps:

* Review and merge this [Pull Request #562](https://github.com/GamestonkTerminal/GamestonkTerminal/pull/562). The reason why we are excited about this one, is that this one contains data from [Sentiment Investor](https://sentimentinvestor.com/screener)!!! Yes, you read it right! This adds another data provider to our list of partnerships: [QuiverQuant](https://www.quiverquant.com/) and [FinBrain](https://finbrain.tech/).
* We want to improve our unique feature of [automatic report generation](https://htmlpreview.github.io/?https://github.com/GamestonkTerminal/GamestonkTerminal/blob/main/notebooks/examples/GME_20210704_191432_due_diligence.html) to help the community benefiting from real good DD. I personally benefit massively from the DD everyone puts here, and feel like there should be a tool to host all this information. And the way we automate it will make it much easier for content creators to add their notes and share their DD with everyone.
* E.g. we'll be working with u/Appropriate_Elk_3827 to simplify the work he has to share this with everyone, see one of his posts that contains multiple functionalities of the terminal: https://www.reddit.com/r/amcstock/comments/oly4w3/dark_pool_guy_here_at_the_latenite_drivethru/?utm_source=share&utm;_medium=web2x&context;=3

* We have been having regular weekly calls with contributors to agree on the structure of the data that will be used for our sick GUI. A sneak peak,

https://preview.redd.it/ti9yqryatdd71.png?width=1530&format;=png&auto;=webp&s;=d3879e811253a74ba6c68b89e0c0e82f3bfa5933

If you are unsure about the terminal, let me tell you why I spend 99% of my spare time developing it:

1. **The terminal is timeless**.
The terminal is fully open-source, which means that it won't die. It also means that there's 100% transparency on everything we do. You can even see the very [first commit](https://github.com/Gamestonk Terminal/GamestonkTerminal/commit/a9c8cda3e0b4d7c03441feacc42d66609126a8d8?short_path=b335 630#diff-b335630551682c19a781afebcf4d07bf978fb1f8ac04c6bf87428ed5106870f5) of the project, and how fast we've grown since then.
2. **The terminal is 100% free.**
There isn't a single command that requires money from the user. It also means equality between every user, i.e. all users are premium in our view.
3. **Unlimited upside.**
With the amount of data we are gathering, the possibilities of what we can do are unlimited. Even this week I was reached out by some DS guys where they want to improve our Residual Analysis menu to add explanations of what does that mean to people less familiar with this mathematical terms.
4. **Driven by the community.**
Most of the features I mentioned above came from users on discord messaging us with "what about a supply-chain analysis like bloomberg terminal" or "look this openinsider website looks legit, we could do something nice with it".
5. **Amazing community.**
I can't stress this enough. Some of the people we're working with on this, are extremely smart and hard-working people. Personally, I'm learning a ton while having a lot of fun.
6. **The opportunity to make a difference.**
Definitely the most rewarding for me. Last year when COVID happened, I had no clue what a SPAC was, and had never invested in anything. Today I have the chance to make an impact in the financial world.You know when people say *"To the people"*. The community behind this project **are actually that same people**. We don't come from Wall St, we all have 9-5 jobs and are trying to level the financial world, 1 commit at a time.Everyone can give their contribution on this project, I welcome every single one of you to join [our discord](https://discord.gg/Up2QGbMKHY). Even if you are not a developer, requesting features, finding bugs, is just as important.

PS: The reason why I only spend 99% of my spare time developing this, is because the rest of the time I spend it buying GME shares. Hope I can be forgiven.

PS2: Also u/half_dane has been kind enough to review the codebase, to reassure all non-technical people that we are legit. See here: [https://www.reddit.com/r/Superstonk/comments/n11g1g/checking_if_gamest onk_terminal_is_actually/](https://www.reddit.com/r/Superstonk/comments/n11g1g/checking_if_gamesto nk_terminal_is_actually/)

Alone we are weak. Together we are strong.
