Short positions revealed(again)
Put positions revealed(again)
Short Interest revealed(again)
Institutional Holdings revealed(again)

So what? Nothing. That's what.

Grain of salt.

Nothing about your GME outlook should be influenced over the next couple of weeks. Reassurances?
Yes. But that's it.

DO NOT ASSUME MOASS!
DO NOT SET YOURSELF UP FOR DISAPPOINTMENT.

DO NOT BUY OTMs!
DO NOT BUY OPTIONS IF YOU HAVE ZERO EXPERIENCE OR LIMITED EXPERIENCE IN DOING SO!

■■■ first. ■■■ always. Vote!

Waves of information both positive and negative are on the way. Moves are being made across
HFs/MMs..DO NOT BE SWAYED.

Tweets from RC, MC, ELON or anyone else are not signals. Articles are not indicators. Squawks are
nothing more than gaps between ads.

As you've seen today. GME will be swinging high and dipping low..and that's okay. Do not be impressed or
overly excited for anything below $250.

Keep holding.
Keep educating yourself.
Keep preparing.
Most importantly keep yourself in check.

Continue to execute in all other areas of your life. Continue to build upon your yesterday and today.
Continue to prepare for greatness and fuckery.

A critical point in the near future price of GME has began, the pressure is not on any one of you or all of us.
We've known that and continue to know that.

Holding at this point doesn't require any deep strategy or deep dives. Just requires continued patience.

No predictions. Just confidence.

The DDs, the research, the investigations, the ■ diving will continue because the floor has NOT been
reached.

You've been through this before, you know the drill. If you haven't been through this before and are new,
seek ■ who are experienced in the way.

Tin Foils Fitted or Rally Caps..keep your head up and your eyes open.

Summer is coming and with it the heat.

EDIT: NOT
