Today I came across an interesting APP / Marketplace: "VeVe"

" VeVe brings the world of collectibles into the digital realm and right into the palm of your hand. Collect limited edition 3D sculptures of your favorite heroes, characters and icons in premium digital format. "- VeVe Collectibles

Interessant Statistics:
1.9 million NFTs sold by 500,000 active User.

Just ad a little wishfull thinking and imagine the potential with the GME Fanbase + the (bigger & maybe better) infrastructur from GME.

I like as well the Idea that you can purchase a 3D Model via NFT (and not just a png).
The the Smartphone Camera you have Augment Reality feeling.

Just imagine: A new Pokemon Game released and you get a "special" Shiny from GME as a Ingame-Code and a 3D NFT. With the Layer 2 solution you dont need to pay 100$ of Dollars on GAS. And you reach many Clients with that...

I really hope that it will use the full potential.
